**3Dchat Reveals Virtual World August Content Updates**

**Mount Pleasant, South Carolina – August 23, 2010** – 3Dchat LLC, in partnership with international veteran developer GolemLabs, announced today several updates taking place during the month of August for its recently launched and rapidly expanding virtual world, **3Dchat**. Included in the update are a various amount of game fixes and additions, achievement rewards, new in-game items, as well as the grand opening of the new Park location.

The 3Dchat world received a few welcomed additions in the form of new in-game clothes and hairstyles to further pimp out your avatar. Also new is a feature that syncs up your 3Dchat mail and friends list with the 3Dchat website, so you can keep touch with everyone while you're away and cannot log into 3Dchat. Achievements are also being added, allowing you to post your prowess to your profile after accomplishing specific in-game tasks.

The biggest update for August in 3Dchat is the addition of the new Park in-game locale. Following in the footsteps of the other 3Dchat locations, such as the Beach and the Old City, the Park provides 3Dchat players an area to cut loose, mingle, converse and get to know other users. Walk through the Park to catch some sun, strut your new clothes, hang out on the benches and watch passersby, or meet up with that special someone for a date – as one of the bigger in-game locations, there's plenty to do in the Park!

**3DChat** is a comprehensive virtual world geared toward a kid-free audience that has something for everyone and offers more varied gameplay options and interactions than any other virtual world currently on the market.
