## **Emergent Chooses xaitment as AI Partner**

**German AI solution incorporated into Emergent's Gamebryo® LightSpeed™**

**Saarbrücken, Germany – July 21, 2009 - xaitment GmbH, one of the leading developers and service providers of artificial intelligence for the games and simulation industries and Emergent Game Technologies, leading source for state-of-the-art software technology and services needed to develop a game, announced today that they have teamed up to incorporate the German AI solution into Emergent's recently announced Gamebryo LightSpeed.**

Gamebryo LightSpeed provides game developers with all the tools they need to make games that break new ground in every field: graphics, content, player experience, genre and technology. The core technology from xaitment—the xaitEngine—is the leading technology for artificial intelligence. The integration of the German AI solution into Emergent's game development system supports the needs of all game designers, artists and programmers, and is an easy way to integrate state-of-the-art AI into other tools and applications in today's game development pipelines.

“Game studios around the world have chosen the Gamebryo engine for its ability to enhance the creation of games at the highest standard”, explains Dr. Andreas Gerber, Group CEO of xaitment. “We are excited to become part of that success story. Together with Emergent we are extending the benefits of Gamebryo LightSpeed by enabling an easy integration of high quality AI for behavior modeling. The embedding of our xaitEngine into LightSpeed marks another important and expansive step for our customer and our company.”

“Developers don't want to take a risk on core technology – they want to invest their resources in creating great gameplay and compelling content, but Emergent, along with our partners like xaitment, provide that ” said John

## 2/3

Austin, VP of partner programs at Emergent Game Technologies. “The integration of Gamebryo Lightspeed and xaitment will enable our customers to easily add AI to their game. “

Press Information 03/2009

The core technology from xaitment—the xaitEngine—is the leading technology for artificial intelligence, especially in the areas of advanced AI, decision-making and behaviors. For those seeking high level AI, the xaitEngine offers highly complex simulated behaviors that exceed comparatively simple, reactive methods. However, the AI modules also include features for the control of game as well as application logic and animation that provide lower level AI options.

The entire xaitEngine is available for purchase or customers may choose individual stand-alone modules. xaitment supports large and small development teams with cost-effective modules that can easily and efficiently be integrated into an overall AI solution for demo or full product and application projects. In addition, each module comes with an intuitive, graphical interface to ease the learning curve and get teams up-and-running faster with more advanced AI.

Press Information 03/2009

#### **About xaitment GmbH**

A spin-off of the world-renowned German Research Center for Artificial Intelligence (DFKI), **xaitment** was founded in 2004 with the mission to create lifelike AI for games and simulations. Their mission led to the development of the **xaitEngine**, a highly customizable and highly modular multi-agent system that enables bots to learn from their mistakes, coordinate activities, compete with each other and achieve their goals with uncanny realism. For more information about xaitment and the xaitEngine, visit [www.xaitment.com](http://www.xaitment.com).

#### **About Emergent Game Technologies**

**Emergent Game Technologies** works with developers and the industry's top middleware providers to create state-of-the-art software and services needed to rapidly move from prototype to final product. These proven, stand-alone solutions include the award-winning Gamebryo software platform which is used by top developers to create high-quality titles for PLAYSTATION®3 system, Xbox®360, PC and Wii™ – including EA-Mythic's *Warhammer Online: Age of Reckoning* and Firaxis' *Civilization Revolution*. To date, Gamebryo has been used in more than 250 shipped games titles with another 150 titles are currently in development. Gamebryo LightSpeed, the next leap forward in game development technology, offers game designers a cross-platform, cross-genre solution that has rapid prototyping, rapid iteration and real-time updates to simplify game technology creation and open the door to exciting gameplay possibilities.

Emergent is headquartered in Calabasas, California, and has offices in Chapel Hill, NC; Austin, Texas; London; Tokyo; China and Korea. To learn more, visit [www.emergent.net](http://www.emergent.net).
